

# FREE 15

# SOIL

*Solubilize Phosphorus*

**BENEFITS:**

**RELEASES PHOSPHORUS FROM THE SOIL**

**CONTAINS NATURAL EXUDATES**

**IMPROVES PHOSPHORUS TRANSPORT**

**INCREASES PLANT ENERGY**

**IMPROVES PLANT STRENGTH**

*Free 15* is a soluble powder concentrate designed for use on all fine turf areas such as golf courses, athletic playing fields, etc.

*Rooted in Science™*

# FREE 15

## SOLUBILIZE PHOSPHORUS

**Free 15** is a new proprietary formulation of concentrated carbohydrates fortified with root and microbial exudates for soil application. Naturally mine P from your soil and allow the sugars and organic acids to efficiently transfer it to the roots and throughout the plant.

### PROFESSIONAL USE GUIDELINES ⑤

#### APPLICATION:

**Free 15** should be thoroughly dissolved and dispersed in the spray tank prior to the addition of other spray components. In some instances it may be desirable to pre-mix (slurry) in a separate vessel prior to the addition to the spray tank. Lightly water in. When thatch accumulation is a consideration, material must be watered enough to pass through thatch to the soil. A pre-application light spiking of the thatch layer is recommended.

#### RATE OF APPLICATION:

Apply 6.24 kg (8 jugs) / ha every two to three weeks during the active growing season. Recommended during rooting or stress periods, like "grow-in", overseeding, and after aerification.

#### COMPATIBILITY:

Although **Free 15** mixes well with a wide array of products, it should not be applied with pesticides as some product efficacy could be lost under some conditions. Since mixing compatibility is greatly influenced by local water sources, compatibility should be checked using the standard jar test prior to tank mixing. For best mixing results, remove tank strainer prior to product addition.

**Net Weight:** 4 x 0.78 kg jugs
