

BENEFITS:

STRESS RESISTANCE

COLOR

ENZYMATIC FUNCTIONS

Phlex-Man is a liquid foliar product designed for use on turf where tests have confirmed a lower than desirable concentration of manganese. Foliar applications will provide immediately available manganese to the plant, especially when applied with our **Carbon Power** products.

Manganese, which is typically low in golf course soils, is critical to stress tolerance. Manganese plays a central role in several reactions required for synthesis of phenolic compounds used for defense mechanisms.

NUTRIENT ANALYSIS

Manganese (Mn)..... 5.00%
Derived from manganese sulfate sequestered with citric acid.

Net Weight: 1.147 kg/L

Manganese
Mn
At. Wt. 54.938

PROFESSIONAL USE GUIDELINES ③

RATE OF APPLICATION:

Apply 2.5-5.0 L/ha biweekly or as indicated by turf conditions. Use higher rates in a known deficiency.
